

Subaru Forester 2.0 D (SH) / Impreza 2.0 D (GR) / Legacy IV 2.0 D (B13_) / Legacy V 2.0 D / Outback 2.0 D (BL, BM, BP, BR) / ...

In addition to the existing Subaru clutch kit, Item No. 3000 950 006 (production version), ZF Services is now offering a **reinforced version** of the clutch kit.

Clutch kit for Subaru vehicles with diesel engine (2008 →)		
Design	Volume production	Reinforced ¹
Item No.	3000 950 006	3000 950 066

¹ The clutch kit is only available as a set. The clutch pressure plate, clutch disk, and release bearing are not sold separately.

The individual components belonging to the two versions are **not** compatible with one another.

Advantages of the reinforced version:

- Reinforced diaphragm spring = longer service life
- Greater contact pressure = significantly increased transmission reliability
- Same release force = no loss of comfort
- Significantly improved engaging point = reduced frictional wear

The named advantages have a significant effect upon the service life of a clutch system. The reinforced version extends the service life under extreme conditions such as journeys on unpaved terrain, on extremely poor paths, or when traveling with a trailer.
